

Whitepaper Contribution Sheet

YUVA FUTURE 6.0 · NATIONAL POLICY WHITEPAPER INPUT

Track	Accessibility
Problem Statement	Indian Sign Language for All (mainstream ISL learning and usage through training, technology, incentives, or policy integration, in at least one critical sector)
Team Details	Beyond Words · YUVA Chapter · Gujarat · Dr. Kiran & Pallavi Patel Global University (KPGU)
Problem Summary <i>Max 50 words</i>	Deaf citizens in India cannot communicate at government counters. Clerks do not know Indian Sign Language, no interpreters are on duty, and the RPwD Act's recognition of ISL has not reached service delivery. Basic civic services — water bills, certificates, complaints — remain inaccessible to millions of deaf Indians.
Solution Summary <i>Max 75 words</i>	Sanket turns any sarkari counter into a two-way Indian Sign Language interpreter and clerk trainer. A citizen signs; in-browser recognition (MediaPipe) shows the clerk text and voice in English, Hindi and Marathi; the clerk replies in one tap and the reply appears as ISL symbol chips. When confidence is low, a live human interpreter joins over a WebSocket relay. Three-minute daily lessons, streaks and a departmental Sugamya Score build the habit and prove impact.
Solution Type	☒ Product ☒ Technology ☐ Service ☐ Hardware ☒ Platform
Policy Recommendation <i>Max 75 words · formal policy ask</i>	We recommend that the Department of Empowerment of Persons with Disabilities (DEPwD), Ministry of Social Justice & Empowerment, in consultation with ISLRTC and DoPT, mandate an "ISL-Ready Counter" designation requiring every public service office to train at least one clerk using an ISLRTC-sourced ISL curriculum under the RPwD Act 2016, and to report an annual Counter Accessibility Score, to close the gap between ISL's legal recognition and accessibility at the service counter.
Target Ministry / Department	Department of Empowerment of Persons with Disabilities (DEPwD), Ministry of Social Justice & Empowerment — with ISLRTC (content authority) and the Department of Personnel & Training (DoPT, staff training).
Expected Impact <i>Max 50 words · quantified</i>	Pilot: 50–100 assisted citizens within 90 days in one taluka office; city rollout in 12 months; national scale to ~6 lakh counters. ~63 million hearing-impaired Indians gain access to civic services; ~10.5 million government employees gain an ISL capability path.
Key Evidence <i>Single strongest statistic + source</i>	Fewer than 300 certified ISL interpreters serve India's ~18 million deaf citizens (National Association of the Deaf; ISLRTC, Govt. of India) — while ~10.5 million government clerks have virtually no ISL capability at service counters, leaving the RPwD Act 2016's recognition of ISL unimplemented where service happens.

Sanket · Team Beyond Words · KPGU University — "From 30 days of training to 30 seconds of service."
